Lab 50 7.5.1 Release Notes
# October 2010

Features & Fixes:

- **Lucidiom-Fulfilled EQ Gifting for Photo Finale 7.** With this version of Lab 50, you can now offer the same lineup of EQ Gifting products on your Photo Finale site that are available on the APM. EQ Gifting is Lucidiom's managed, photo-merchandise fulfillment program that allows retailers to offer over 500 personalized gifting products on their kiosks and Photo Finale site. If you aren't currently enrolled in the program, sign-up is free… just contact your sales rep.

- **In-Store Gifting for Photo Finale 7.** Labs participating in Lucidiom's EQ Gifting program now also have access through Lab 50 to pick & choose gift products to produce in-house (excluding items with content licensing restrictions, e.g. Disney plates). A new "You must enroll in the EQ Gifting program to take advantage of these locally producible products, but sign-up is free… just contact your sales rep.

- **Member Account Credits.** User accounts can now be assigned a dollar-value balance in Lab 50. This augments the existing Product Credits feature (e.g. 10 4x6 print credits). A new "Account Credit" tab in the Member Details screen allows an operator to add credit to a member's account, and displays a full transaction history for the user. If a customer has an available Account Credit, it will automatically be applied to their online order as a discount before payment is taken.

  (*Note: Account Credits do not currently apply to APM kiosk orders.)

> ## 7.5 Release Notes
> Full release notes for the original Lab 50 7.5.0 release are available online.

- **Enhanced Discounts & Promotions.** Lab 50 and Photo Finale now support applying multiple promotions to a single order, and the Lab 50 Order Summary screen will display a summary of the discounts applied to a given order. Order and product discounts and coupons are listed individually, and price tier discounts and print credits are bundled together as "Other Adjustments."

- **Microsoft .NET 4.** Lab 50 has been updated to take advantage of .NET 4, which includes a number of performance optimizations and low-level bug fixes. The 7.5.1 installer will warn you if you do not have .NET 4 (Full Profile) installed on your machine. The latest version of the .NET Framework can always be found at http://www.smallestdotnet.com.

- **APM Support Reminder.** Lab 50 will now remind you when the support contract for any of your APMs has expired, or is expiring within the next 30 days.

- Fixed rendering issues in FolioServer and Photo Finale 7 that sometimes led to squished/stretched photos, especially when dealing with photos that have an in-camera orientation flag set, as well as photos that the user rotated/zoomed/panned online.

- Fixed the problem that prevented operators from deleting certain product catalogs.

- Fixed the problem that prevented APM orders from being "Exported" (rather than printed) when they included a custom dealer product which does not exist in the dealer's product catalog.

- Fixed an issue with category previews not being copied when importing from a supplier catalog.

- Fixed an issue that might misreport the number of codes assigned to a Coupon Campaign.

- Fixed an aesthetic issue in the Print dialog which would not display the thumbnail for gifting items ordered from the older Photo Finale v6 site.
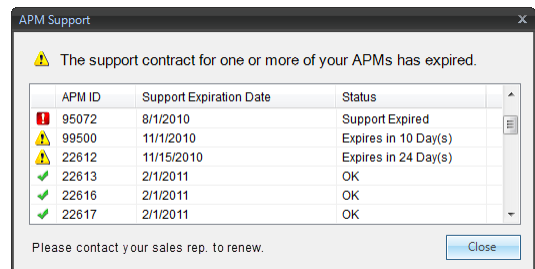

- Fixed support for custom APM products configured in an apmconfig_products_custom.xml file.

- The Graphx Photogize XConnect printer interface will now transmit "Special Instructions" from the APM / Photo Finale orders to Photogize.

- Fixed an issue which prevented operators from adding new products to the rendering settings in the Setup Wizard for the Generic Hotfolder printer interface.
