# Chapter 7 - Add-On Component Configuration

This section covers the configuration of APM Add-On components in the Setup Wizard. Please see the previous chapter for detailed instructions on accessing and using the Setup Wizard.

Each of the following features requires the proper licensing to function in the software. If you are not licensed for any of these features, it will be noted in the section you are attempting to change. Please contact your regional sales representative to purchase these add-on components for your APMs.
