

# Editing Text and Photos using Lab 50

Lab 50 features a built-in editor for color correcting photos, cropping, and adjusting color density. Additionally, a lab operator can edit the photos and text on each page of a creative product.

## Editing Photos

To access the internal editing features, simply click on an order from the **Orders** tab, click on the *Photos* option on the right panel, then double-click on a photo to open the editing screen. Once you've made your adjustments, click *Save and Exit* in the top left panel to return to the orders screen.

If you'd prefer to use a third-party application for editing, such as Photoshop, access the **Settings** tab > **Preferences** > **Photo Processing** > **Photo Editing**, and select the option to *Use an external editor*. Next, follow the steps as above to open the photo, and the photo will instead launch in the external editor.

Editing an Image in

## Editing Creative Products

To make changes to text in a photo book, select to **Print** the order then on the print preview screen select the *Preview/Edit* option. Using the preview library on the bottom panel, select the page you would like to edit, then select *Edit text...* on the left panel. Change the text as necessary, then click **OK**. If you'd like to edit a photo on an individual page, use the directions given above for photo editing, and those changes will be applied within the photo book.

**Note:** When editing certain products such as a book or calendar product, it may take a few minutes to initially load the images for editing due to file size and speed/specs of the system.
