

# Add-On Components

This section is all about APM Add-On components and how to set them up. For the standard APM software license, the prints, creative, scanning, passport, and gifting modules are included with every APM license. iOS Connect, Facebook Connect and Wi-Fi Connect are generally purchased separately and each requires the proper licensing to function in the software. If you are not licensed for any of these features, it will be noted in the section you are attempting to change.
