Mounting Android Devices as a Disk Drive for Use on the APM
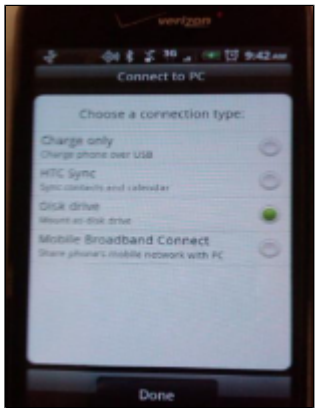

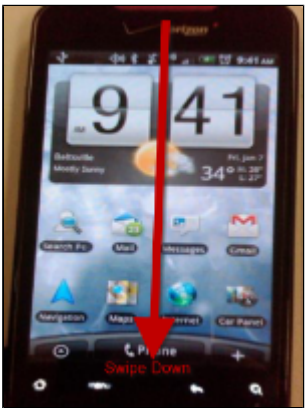

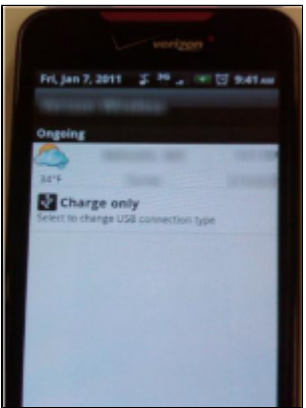

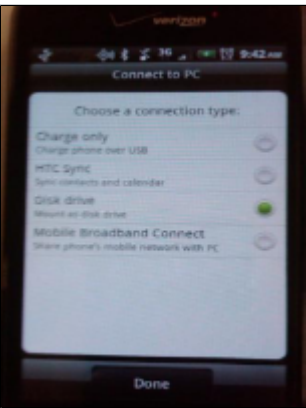

In order for an Android device to be used as a device on the APM, it must be setup as a Disk Drive. To do this please follow these instructions:

1. Plug the device into the system using the appropriate USB cable making sure the phone is unlocked.
2. On the device itself a new screen will appear similar to the image on this page. From the options, select "*Disk Drive*" as the option.
3. Press the "*Done*" or "*OK*" button on the phone.
4. If you do not get the "*Connect to PC*" screen when you connect the Android device to the APM, you may need to swipe down the "*Window Shade*" from the top of the screen to display the "*Ongoing*" screen.
5. From the "*Ongoing Screen*" touch the USB status line which displays the "*Connect to PC*" screen.
6. Choose "*Disk Drive*" from the options and touch "*Done*"

ⓘ **Menu Navigation for Android Devices**

Some Android menu selections may vary based on the make, model, and/or version of the Android Operating System on the device, but the general settings will more or less be similar.
